

<b>C# Final Evaluation and Comments</b>	<b>Caleb Straily</b>
---	--------------------------

Below you'll be able to see how your program was scored (out of 5) and along with comments.

Code Readability	Code well Commented	Program Performance	Presentation Quality
<b>4.71</b>	<b>4.71</b>	<b>4.57</b>	<b>4.71</b>
<b>Comments</b>			
<b>Jonathan:</b> "In the brief period that I've been able to interact with you, I have been doing my best to gauge your level of knowledge. The Kiosk project let me know that you understand what you're doing. I noticed that you Parsed the account number into a long 2x before the Luhn Algorithm, when parsing it once would have sufficed (ask me and I'll show you what I mean). I look forward to seeing your future progress."			
<b>Keesler Evaluator:</b> "Great slides. Good job not hard coding the file path. Good use of comments, not too few or too many. Explained the project well."			
<b>Keesler Evaluator:</b> "Noticed a bug during the program run. It was corrected in code review by the instructor and was not seen in real-time-run. Good work."			
<b>Hancock Whitney Evaluator:</b> "Good use of switch/case. Program broken into multiple console pages confusing at times." (Jonathan Note: I think he's referring to frequent Console.Clear() commands)			
<b>MCA Evaluator:</b> "Ace minus the small change bug."			
<b>MCA Evaluator:</b> "Great job explaining your knowledge of C#. Including future editions in your presentation is a great mindset."
